Software Engineer | Full-Stack | AI/ML | Cloud-Native Systems

SUMMARY

Full-stack software engineer building reliable, user-focused systems across React, TypeScript, Python, FastAPI, PostgreSQL, Docker, Linux, and cloud-oriented architectures. Experienced in designing REST APIs, real-time interfaces, persistent data workflows, automated tests, and AI/ML features while collaborating across technical and business teams.

PROFESSIONAL EXPERIENCE & PAID CLIENT WORK

Strategy & Operations Analyst (SNOW support team) Aug 2025 - Present
HighRadius

- Built a Python ML pipeline to predict poor-CSAT support cases using class-weighted logistic regression (ROC-AUC ~0.78 across 1,174 cases).
- Improved signal quality with SMOTE, SHAP explainability, and zero-shot taxonomy classification; translated model output into operational decisions.
- Produced weekly business reviews across six enterprise products using support cohorts, operational KPIs, and customer-satisfaction trends.

Full-Stack Developer Mar 2025 - May 2025
Indian Army - Employee Management System

- Developed and deployed an employee-management system integrating an ESP32-hosted web server for local-network access without external cloud hosting.
- Worked across application development, embedded networking, and on-premises infrastructure to deliver an end-to-end system.

Fleet Management Application Developer Aug 2024 - Aug 2025
M&K; Logistics

- Engineered a Flutter/Dart/PostgreSQL fleet application for attendance, shift tracking, trip reporting, and vehicle administration across 50+ vehicles and 30+ drivers.
- Implemented role-based workflows, GPS-enabled attendance, vehicle assignments, document verification, authentication, and real-time driver activity.

SQL Server High Availability Consultant (Freelance) Feb 2025 - Mar 2025
Soda Bay Company - United States (Remote)

- Contributed to configuring a two-node Microsoft SQL Server high-availability environment on Windows Server 2022, supporting database redundancy and failover readiness.
- Configured certificate-based authentication, database-mirroring endpoints, and server-to-server connectivity for SQL Server Always On Availability Groups.
- Diagnosed Windows Server Failover Clustering (WSFC), SSL authentication, firewall, DNS, and network connectivity issues to improve database availability and operational resilience.
- **Technologies:** Microsoft SQL Server, Windows Server 2022, T-SQL, WSFC, Always On Availability Groups, TCP/IP, SSL certificates.

Full-Stack Developer & Hardware Integration Lead Project engagement
Deloitte - Innoverse Smart Retail Automation Prototype

- Developed a full-stack web application for a two-floor futuristic smart-retail prototype, enabling software interaction with physical store components.
- Engineered and integrated motor-driven levitation mechanisms by combining electronics, hardware controls, and application functionality.
- Led backend development and hardware integration, connecting digital control interfaces with electromechanical components.
- Contributed to an interdisciplinary retail-technology prototype spanning web development, embedded electronics, and automation.

EDUCATION

Woxsen University, Hyderabad | B.Tech, Computer Science & Engineering (AI & ML) | 2022 - 2026

Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming

TECHNICAL SKILLS

Languages: Python, C++, C, JavaScript/TypeScript, SQL, Bash
Frontend: React, Vite, responsive UI, SSE
Backend/Data: FastAPI, REST APIs, SQLAlchemy, PostgreSQL, NoSQL concepts
Cloud/DevOps: AWS fundamentals, Docker, Docker Compose, GitHub Actions, Linux, Git
AI/ML: Ollama, ONNX Runtime, PyTorch/TensorFlow, scikit-learn, SHAP

SELECTED PROJECTS

OpsPilot - Multi-Tenant AI Operations Hub

Tech: Python, FastAPI, React, TypeScript, PostgreSQL, SQLAlchemy, Docker, SSE, GitHub Actions

- Built a tenant-scoped operations dashboard with REST APIs, signed-cookie auth boundaries, role-aware access, encrypted OAuth-token primitives, and health checks.
- Implemented a GitHub webhook ingestion path with HMAC signature validation, replay deduplication, event persistence, and tenant-filtered Server-Sent Events for live dashboard updates.
- Created Docker Compose infrastructure for API, React web app, and PostgreSQL; added a clean frontend shell with demo-mode metrics and live activity feed.

DealMind (Yureni) - Local-First AI Deal Intelligence

Tech: Python, FastAPI, React, TypeScript, PostgreSQL, Ollama, Hindsight memory, Docker

- Built an AI sales-intelligence platform that stores meetings, emails, and notes as persistent searchable deal memory.
- Implemented evidence-grounded Q&A;, temporal stakeholder analysis, explainable deal-risk scoring, deal/timeline/stakeholder APIs, and source traceability.
- Delivered a React dashboard and voice interface with Dockerized services and backend, frontend, and AI evaluation tests; resolved a production-style memory extraction issue by separating answer and extraction models.
- Selected as a finalist at the Devnovate Hackathon hosted at the Microsoft office in Hyderabad for the DealMind prototype.

ACHIEVEMENTS & CERTIFICATIONS

Leadership: IEEE Student Branch - Chairperson; Secretary - Baudhik Club; Co-founder - The Karm Haus Studio
Certifications: Data Structures (UC San Diego); Algorithms for Searching, Sorting and Indexing (CU Boulder); Deep Learning with Keras (IBM); AWS Cloud Foundation
